Word of Life - Cultural trends exist that seek to anaesthetize consciences with spurious arguments. With regard to the embryo in the mother's womb, science itself highlights its autonomy, its capacity for interaction with the mother, the coordination of biological processes, the continuity of development, the growing complexity of the organism. It is not an accumulation of biological material but rather of a new living being, dynamic and marvelously ordered, a new individual of the human species. This is what Jesus was in Mary's womb; this is what we all were in our mother's womb. We may say with Tertullian, an ancient Christian writer: "the one who will be a man is one already" there is no reason not to consider him a person from conception.
